PROJECTS

“CROP YIELD PREDICTION”

In the domain of data-driven agriculture, my team of five and I developed a Crop Yield Prediction application that estimates crop production based on key factors such as rainfall, temperature, pesticide usage, and geographical location. My primary role was in backend development and data handling, where I focused on integrating machine learning models, processing input data, and delivering accurate yield predictions through a user-friendly interface.

“EVOLVE” Fitness Application

In the domain of application development, my team, consisting of five batchmates, and I developed a dynamic fitness application. My primary responsibility was as a frontend developer, where I focused on designing and implementing the user interface and user experience components.
